Profile

AI-focused technical builder with experience across AI experimentation, model evaluation, inference workflows, and AI-powered developer products. Strong interest in designing reliable AI systems through technical problem solving, experimentation, and systematic evaluation.

Education

Indian Institute of Information Technology, Ranchi

B.Tech in Electronics & Communication Engineering — CGPA: 8.27

2024 – 2028

Ranchi, Jharkhand

Work Experience

AI Technical Lead

Jun 2026 – Present

Stealthera Innovations Pvt. Ltd.

Remote

- Led technical development of AI-driven voice and speech workflows across data preparation, model experimentation, inference, evaluation, and integration.
- Designed experiments across speech/language models, preprocessing strategies, and inference configurations to improve AI system quality and reliability.
- Built evaluation workflows covering accuracy, latency, resource usage, failure cases, and edge-case behavior to guide technical decisions.
- Investigated model and pipeline failures, documented technical trade-offs, and translated findings into actionable engineering recommendations.

Business Analyst & Product Operations

2019 – Present

JSBI

India

- Translated user and operational needs into structured requirements, workflows, and process improvements across academic, administrative, and technology functions.
- Coordinated with stakeholders to evaluate solutions, track dependencies, document decisions, and support continuous product and process improvement.

AI / Technical Projects

HELIOS — Enterprise API Intelligence Workbench

2026

Next.js, TypeScript, Ollama, OpenAPI, Turborepo

Live — GitHub

- Architected an AI-assisted API engineering platform combining OpenAPI 2.0/3.0/3.1 analysis, security auditing, SDK workflows, change analysis, and developer assistance.
- Designed a local LLM copilot using Ollama for API understanding and technical assistance, emphasizing controlled generation, privacy, and reliability.

ShellMind — Local-First AI Developer Assistant

2026

Rust, Ollama, SQLite, Zsh, macOS

Live — GitHub

- Engineered a natural-language developer assistant that converts user intent into executable workflows using local AI and deterministic controls for safe execution.
- Implemented command validation, human approval, restrictions, and shell-injection protection; tested adversarial scenarios through 90 unit tests.

RhythmNet — Inter-Patient ECG Arrhythmia Classification

2026

Python, PyTorch, XGBoost, WFDB, ONNX, FastAPI

Live — GitHub

- Built a patient-independent ECG classification pipeline on the MIT-BIH Arrhythmia Database with strict record-level separation across train, validation, and test sets.
- Compared XGBoost and CNN approaches and optimized the selected model for ONNX FP32/INT8 inference, achieving 100% FP32 and 99.125% INT8 agreement with the reference model.

Technical Skills

AI / ML: Generative AI, LLMs, Prompt Engineering, AI Prototyping, LLM Evaluation, NLP, Deep Learning, PyTorch, XGBoost, Hugging Face, Ollama

AI Engineering: AI System Design, Model Evaluation, Inference Optimization, Experimentation, Model Integration, Technical Validation, REST APIs, OpenAPI

Software & Product: Python, C++, SQL, JavaScript, TypeScript, Rust, FastAPI, Next.js, React, PostgreSQL, SQLite, ONNX, Git, Requirements Analysis, System Architecture, Product Testing, Documentation, Stakeholder Coordination

Achievements

Smart India Hackathon: Qualified internal rounds to represent IIIT Ranchi at the national-level competition.

Problem Solving: Solved 200+ DSA problems across LeetCode and CodeChef; CodeChef maximum contest rating of **1553**.
