Education

Indian Institute of Information Technology, Ranchi

B.Tech in Electronics & Communication Engineering — CGPA: 8.27

2024 – 2028

Ranchi, Jharkhand

Work Experience

AI Technical Lead

Jun 2026 – Present

Stealthera Innovations Pvt. Ltd.

Remote

- Led technical development of AI-driven voice and speech workflows across data preparation, model experimentation, inference, evaluation, and integration.
- Designed and evaluated experiments across speech and language models, preprocessing strategies, and inference configurations to improve AI system quality and reliability.
- Built evaluation workflows covering accuracy, latency, resource usage, failure cases, and edge-case behavior to support technical decisions.
- Investigated model and pipeline failures, documented technical trade-offs, and translated findings into actionable engineering recommendations.
- Collaborated across AI and engineering workflows on model integration, debugging, experimentation, and validation of AI features.

Business Analyst & Product Operations

2019 – Present

JSBI

India

- Analyzed user and operational workflows, identified process gaps, and translated business problems into structured product and technology requirements.
- Supported requirements gathering, workflow design, prioritization, process optimization, and execution across academic, administrative, and technology functions.
- Coordinated with stakeholders to evaluate solutions, track dependencies, document decisions, and improve digital workflows.

AI / Technical Projects

HELIOS — Enterprise API Intelligence Workbench

2026

Next.js, TypeScript, Ollama, OpenAPI, Turborepo

Live — GitHub

- Architected an AI-assisted API engineering platform combining OpenAPI 2.0/3.0/3.1 analysis, security auditing, SDK workflows, change analysis, and developer assistance.
- Designed a local LLM copilot using Ollama for API understanding and technical assistance with focus on controlled generation, privacy, and reliability.
- Defined security and compliance analysis workflows covering PCI-DSS 4.0, HIPAA, and OWASP Top 10 to support engineering decisions.

ShellMind — Local-First AI Developer Assistant

2026

Rust, Ollama, SQLite, Zsh, macOS

Live — GitHub

- Engineered a natural-language developer assistant that converts user intent into executable workflows using local AI and deterministic controls for safe execution.
- Designed an AI execution pipeline with command validation, human approval, restrictions, and shell-injection protection before system actions.
- Tested adversarial inputs and failure paths through 90 unit tests, identifying unsafe or inconsistent behavior and improving reliability.

Technical Skills

AI / ML: Generative AI, LLMs, Prompt Engineering, AI Prototyping, LLM Evaluation, NLP, Deep Learning, PyTorch, Hugging Face, Ollama

AI Engineering: AI System Design, Model Evaluation, Inference Optimization, Experimentation, Model Integration, Technical Validation, API Integration

Software: Python, C++, SQL, JavaScript, TypeScript, Rust, REST APIs, OpenAPI, FastAPI, Next.js, React, PostgreSQL, SQLite, Git

Product & Leadership: Technical Problem Solving, Requirements Analysis, System Architecture, Workflow Design, Product Testing, Documentation, Stakeholder Coordination, Agile/Scrum

Achievements

Smart India Hackathon: Qualified internal rounds to represent IIIT Ranchi at the national-level competition.

Problem Solving: Solved 200+ DSA problems across LeetCode and CodeChef; active participant in CodeForces contests.

CodeChef: Achieved a maximum contest rating of **1553**.
